

Guidelines for Image Submissions

The author is responsible for obtaining copyright permission for the work to be published. Proof is required if the work is thought to be in the public domain.

Scanned Images

Scans of 8x10 inch or larger photographs or artwork should have a minimum resolution of 300 dpi/ppi or approximately 3000 pixels along the long dimension of the work. 4x5 inch artwork should be scanned at 600 dpi/ppi. Scans of 35mm film should be made at 2400 dpi/ppi. These are minimum resolutions; larger images are accepted. Image files should be in TIFF or Photoshop format.

Stock Images

If working with a stock company, images should be print quality. They are not required to be color.

Digital Camera Images

Send a copy of the original camera file.

Graphics

Graphs, graphics, or line art should be submitted as Adobe Illustrator or PDF files. These types of files should be vector graphics, not rasterized images that use pixels like photographs. Microsoft Excel data is accepted.

Please contact the assistant editor at william_ash@mac.com if you have questions about these requirements or are unsure if an image is acceptable.
